DETAILED ACTION

Claims 1-22 are pending in this application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 6-15 and 18-22, drawn to a method of producing an immune response in an animal comprising administering a metal-containing nucleic acid duplex, classified in class 514, subclass 44.
- II. Claims 1 and 5-14, 16-22, drawn to a method of producing an antisense response in an animal comprising administering a metal-containing nucleic acid duplex, classified in class 514, subclass 44.

The inventions are distinct each from the other because of the following reasons:

The methods of Group I and II are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The methods of Group I comprise different modes of operation, function and effects from that of the methods of Group II. Group I comprises the steps of administration of a metal-containing nucleic acid duplex for the purpose of detecting an immune response in an animal. The step and effect of detecting an immune response is not required for nor is present in the methods of Group II. The methods of Group II involves the step of detecting an antisense response in an animal. The step and effect of producing an antisense response is not required for nor is present in the methods of Group I.

Art Unit: 1636

Therefore, the inventions of Group I-II are different distinct groups capable of supporting separate patents.

The searches required for the different groups are not coextensive; a search for art pertaining to methods inducing an immune response in an animal is not coextensive with a search for art pertaining to methods for inducing an antisense response in an animal. Therefore, restriction for examination purposes as indicated is proper.

Claims 1 and 14 link inventions I and II. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claims, claims 1 and 14. Upon the allowance of the linking claims, the restriction requirement as to the linked inventions shall be withdrawn and any claims depending from or otherwise including all the limitations of the allowable linking claims will be entitled to examination in the instant application. Applicants are advised that if any such claims depending from or including all the limitations of the allowable linking claims is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Applicant is reminded that upon cancellation of claims to a non-elected inventions, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
